

# MANAGED WIDE AREA NETWORKS

---

At Exa Networks, we understand how invaluable a Wide Area Network can be to a business with multiple locations. Ensuring that geography is not a boundary to communication, a WAN enables different branches and offices to exchange data securely and easily.

As experts in managed WANs, we are able to both build the perfect network solution for your business, and ensure that it is continuously maintaining maximum efficiency - allowing you to concentrate on the daily demands of running a company.

*An Exa Networks' managed WAN can transform the way your business works*

We provide a complete range of connectivity services which can be incorporated into your company's WAN - from FTTC broadband through to DarkLight; our pure fibre connection, delivered using our dark fibre network. This means that different connectivity speeds and varying amounts of bandwidth can be installed according to the needs of each individual branch, allowing a truly flexible WAN.

For example, it may be that your company's Head Office requires a dedicated fibre connection with a large amount of bandwidth, whilst a smaller office with less personnel and data needs can operate effectively with a standard broadband service. With Exa Networks, you will never have to pay for more than you require.

To learn more about the ways in which we can build and manage your company's WAN, please don't hesitate to get in touch with a member of our team.
