Internet & Filtering for Schools

PupilMail

PupilMail is our child-friendly email service. Inclusive with every domain hosted with Exa Education, it is the perfect introduction to email for young students.

Developed and designed by Exa Education specifically for primary schools, it enables young children to become comfortable with an email system – whilst always keeping them safe from the external dangers which can come with using a traditional mail client.

Features

- **User-friendly interface.** With its large, colourful icons and intuitive interface, PupilMail is easy and enjoyable for young students to use.
- **Inappropriate word filtering.** PupilMail automatically detects emails with offensive or inappropriate language and redirects them to a nominated staff member to be dealt with as required.
- **School-only access.** Ensure children are only able to communicate with staff and other students by restricting their access exclusively to those with school email addresses.
- **E-penpal service.** Set up an e-penpal system with another school anywhere in the world. This enables students to communicate with pupils across the globe, whilst still being protected from any other emails being sent or received.
- **Completely customisable.** Each aspect of PupilMail's set up can be adapted according to your school's preferences; from which words are deemed inappropriate to which email addresses your students are able to communicate with.
- **Virus scanning and spam filtering.** All incoming emails are scanned and filtered to ensure pupils only receive safe, secure email content.
- **Unlimited email accounts.** With PupilMail, there is no limit to the number of users a school can have, or the amount of storage they have access to.

If you would like to learn more about PupilMail, please don't hesitate to get in touch.
