Internet & Filtering for Schools

*Help is always
available...*

A report released on Monday by the Royal Society has highlighted the need for a £60 million investment to train teachers in GCSE Computer Science.

Raising some worrying concerns on the subject that became part of the national curriculum in 2014, the authors found that 30% of GCSE-level pupils in England are at schools where the subject is not taught, and that current Computing teacher recruitment targets are only being met by 68%.

As your Internet Service Provider Partner, we've always been dedicated to ensuring that your schools are able to embrace everything technology has to offer. That's why in 2015, we created [exa.foundation](#). An organisation committed to providing teachers with the courses, resources and guidance needed to teach Computing as effectively as they possibly can. And, as an Exa Education Partner, you receive access to everything [exa.foundation](#) has to offer - completely free.

With courses suitable for every age - from the perfect introduction to KS 1 - 2 Computing with Scratch right through to algorithm design, Python and code-sharing to help teachers with the programming and theory elements of the GCSE Computer Science examination - we're able to help with every aspect of the curriculum.

So, whether you'd like to book a one on one session, to take part in an event with other nearby schools, sign up for our GCSE MOOC, or just have a chat over the phone with our very own Computing Master Teacher, help is always available through [exa.foundation](#) - so please don't hesitate to get in touch.
